

Malone Specialty Inc. and Actsoft have partnered to bring customers an innovative and patented, on-demand commercial vehicle management and report center with GPS track solution.

This system monitors and controls vehicle and engine activity, and is proven technology currently being utilized by thousands of vehicles. This is in addition to the Comet Tracker Software.

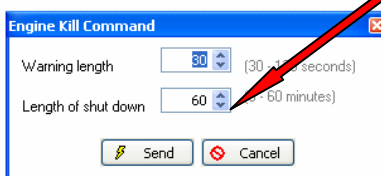

Functions:

- Monitors engine oil pressure, temperature, coolant level. The system is able to shut down the engine should a fault occur.
- Monitors idle time and shuts the engine down if the time exceeds a preset limit.
- PTO operation and extreme outside temperatures can be programmed to disable idle limiting.
- Monitors battery voltage and alarms if the voltage drops below a preset point. If the engine is not running it can trigger an optional latching relay to shut of all electrical items connect to the relay.
- Alarms if the headlights are left on with the engine off.
- Faults are recorded in system memory and sent over the air.
- Can monitor box temperature for perishable cargo.
- Includes remote engine shutdown capability.

View events on your computer

Shut down engine remotely from your computer

How it works:

- Connects to vehicle system & collects real-time activity
- Sends event data to the dispatchers desktop
- Comet Tracker sends the data through the sprint network on the standard GPS request internal specified by the user, or immediately grabs a GPS position and transmits certain data events (Engine Shutoff, Low Oil Pressure, Etc)
- Customer receives data via email, alerts, reports and a visual display Comet Tracker Grid

Benefits:

- Reduces engine failures
- Saves fuel cost by idle limiting
- Saves jump starts by protecting the battery
- Provides valuable management information on the vehicle and driver performance
- Reduces overall wear and tear on the vehicle; increasing longevity and maintenance savings

Monitors Real-time Vehicle Activity such as:

- Engine Shutoff*
- Idle Limiting*
- Oil Pressure*
- Low Battery*
- Engine Temp*
- Coolant Level*
- Door(s) Open/closed (front and back)
- School Bus Stop Sign (opened or closed) Front bar deployed
- Hazard lights operating when front door open & stop sign deployed
- And any additional vehicle activities you would like to collect...

*Included system features
